9. REFEREED PUBLICATIONS

Publication Venues. My research focuses on the intersection of Systems and Security. In these fields, top-tier conferences are more prestigious than journals due to their rigorous peer-review processes and competitive acceptance rates. They serve as the primary publication venues. I predominantly publish in Security & Privacy venues while actively serving on program committees for Systems conferences. The premier conferences in Security & Privacy include IEEE S&P, USENIX Security, ACM CCS, and NDSS. In Systems, the leading venues are ACM SOSP, USENIX OSDI, ACM ASPLOS (at the intersection of Systems, PL, and Architecture), ACM EuroSys, and USENIX ATC. Publications in top venues are **highlighted**.

Author ordering. In my subfield author names on publications are generally ordered with the primary student contributor being first, followed by other students, then faculty co-authors. When there are multiple faculty co-authors, the last faculty is generally the supervisor of the first author and lead advisor on the project. Below, **supervised students and postdocs** co-authors are highlighted.

Citations Metrics. Based on Google Scholar data, as of October 27, 2026, my work has been cited 4,269 times and my h-index is 27 (27 of my papers have 27 or more citations).
